FREEFALL DROP

The freefall drop slide is THE possibility to combine the slide with a free fall. Since the guest is led through the slide before the fall, a reduced safety zone in the water basin is sufficient.

This is ideal for projects with limited space or as part of multi-action towers, whereby the length of the slide and the drop height can be individually planned and adjusted. However the pool depth should be taken into account.

All values are guidelines – changes may occur after planning and approval by technical services. All slides can end in an individual shallow water landing pool or in an existing pool. Both solutions are examined on a case-by-case basis
